

CLOUD 2014

I mobili laccati lucidi ed opachi vengono realizzati verniciando pannelli di agglomerato di legno denominato medium density (MDF) nobilitato in ambo i lati con resine melamminiche. I mobili in legno sono realizzati in multistrato di legno betulla finlandese ad incollaggio fenolico ed impiallacciati con essenza di legno rovere o noce canaletto. Si procede poi alla verniciatura con vernici opache con trattamento superficiale a poro aperto spazzolato.
